

## PROTECT YOUR HVAC SYSTEM FROM DAMAGING IMPACT

Damage from hail and other flying debris can be a common threat to HVAC systems. When the vulnerable fins of your coil have been struck, bending and compression of the coil matrix may occur, resulting in clogs that undermine the heat transfer functions of your HVAC unit. Since this damage can be cumulative, your performance efficiency may be diminished over time; you may not even be aware of the growing problem. In some cases, larger hailstones may impact the coil, causing immediate coil failure or producing leaks which allow refrigerant to escape, resulting in system failure. This will require replacement of the unit, an expensive alternative to protecting the unit. Hailguards are an optimal means of managing your risk, protecting your unit and keeping it running at maximum efficiency.

- Engineered using 20 gauge galvanized steel designed to protect from hailstones
  1" diameter and larger
- ► HG-A Hailguards can also function as snowguards, keeping heavy accumulation off the surface of the coils, which further protects from compromised performance

## **HG-A CONSTRUCTION/FINISH**

MaterialPowder Coated 20 gauge galvanized steelPowder CoatP1135-G6 Polyester TGIC Erie Powder Coating

3 mil nominal (+/- 1 mil) uniform thickness over the entire part

**Color** Matches Outdoor Unit

**Screen** 1 inch (25.4 mm) square hole pattern
