Compatible with all stationary air compressors up to 10HP

EMAX goes Silent

Dayton Ohio - EMAX (a U.S. based Industrial Compressor Manufacturer) announced an innovative new product planned for release at this year's National Hardware show. This breakthrough product promises to revolutionize the air compressor industry by providing users with the ability to run any brand of stationary compressor in any environment with extreme noise suppression.

Engineered and manufactured in the U.S.A. "**The Silencer**" reduces stationary compressor DBA ratings by as much as 25%+! A noise suppression device was first conceived by EMAX engineers after feedback from competitor compressor users revealed a large number of complaints regarding the extreme noise level of their compressors in a work environment. Stationary air compressor noise levels typically require owners to incur the added expense of a building or structure to house the compressor in an attempt to reduce noise in the work environment. **The Silencer** can be installed and operated in *all* Garage, Farm Shop, and Industrial applications which eliminates the need for traditionally expensive and often inadequate separate buildings or structures to house the air compressor. Installation of *The Silencer* is accomplished in a matter of minutes and provides stationary compressor owners with a low cost solution to peace and quiet in the work environment!

*"Stationary compressor owners have complained for years about the loud noise generated by their air compressors in a work environment. Our **patent pending** new noise suppression system is designed to reduce decibel levels on compressors during operation up to 25%. To the human ear this translates into sound reductions of over 50%! We have been overwhelmed with initial customer response and the positive impact it is making in the workplace"- said **Matt Cain** (CFO/President of EMAX Compressor).*

EMAX Compressor has been designing and manufacturing air compressors since 1977 and is an industry leader in air technology. By streaming new ideas from the marketplace to the Engineering desktop EMAX has generated on average over 10 breakthrough new air solutions each year.
