PRODUCT DESCRIPTION

Real-Time Refrigeration Monitoring

Stop worrying about your inventory in the middle of the night or while away on a trip with the Freezer Sentry Wireless Freezer Alarm by Level Sense. This state-of-the-art wifi hygrometer for commercial, home and institutional use lets you step away with confidence. In the event of equipment malfunction or loss of power, Freezer Sentry alerts our monitoring platform. We then send text and email notifications to you so you can act quickly to move produce, meats or medications and contact repairmen.

Easy Spoilage Reduction

Freezer Sentry Wireless Humidity and Temperature Monitor installs in under 5 minutes without tools or special expertise. Any homeowner or small business owner can hook the 4-foot sensor to a wire shelf inside the refrigeration unit and mount the exterior control box to the outside of the unit or on a wall with included hardware. Then download our iOS and Android compatible app and complete the notifications set-up. Breathe easy knowing that a freezer alarm alert when temperatures drop will help protect you from expensive inventory loss.

Always On-Guard

Unlike other internet connected thermometers, Freezer Sentry has no batteries to constantly change. It comes with an AC power supply. If it goes offline during a power outage, the dropped connection triggers an alert to you so you are never in the dark about your freezer or refrigerator status. Freezer Sentry is also equipped with a loud 90-decibel audible siren for those times when you are on the premises but not by your phone or computer.
