Model 0011-IFC[®] Cartridge Circulator

The High Velocity series 0011-IFC includes an Integral Flow Check, saving installation costs while improving system performance. The removable, spring loaded IFC^{*} replaces a separate in-line flow check and prevents gravity flow when the circulator is not operating. Available in Cast Iron or Stainless Steel construction.

©Taco Catalog # 100-21 Supersedes: 04/22/10

Features

- Integral Flow Check (IFC") Prevents gravity flow Eliminates separate in-line flow check Reduces installed cost, easy to service Improved performance vs. In-line flow checks
- Unique replaceable cartridge
 Field serviceable
- Unmatched reliability
 Maintenance free
- Quiet, efficient operation
- Direct drive-Low power consumption
- Self lubricating, No mechanical seal
- Standard high capacity output
 Compact design
- Wide range of applications
- Cast Iron or Stainless Steel construction, Flanged connections

Materials of Construction

Model Nomenclature

F – Cast Iron, Flanged SF – Stainless Steel, Flanged IFC – Integral Flow Check

Performance Data

Max. Flow: 30 GPM Max. Head: 31 Feet Min. Fluid Temperature: 40°F (4°C) Max. Fluid Temperature: 230°F (110°C) Max. Working Pressure: 125 psi Connection Sizes: 3/4", 1", 1-1/4", 1-1/2" Flange

Application

The 0011-IFC with an Integral Flow Check is designed to reduce installation costs when zoning with 00° circulators. Typical uses include large residential or light commercial high head / medium flow applications such as hydronic or radiant heating, hydro-air fan coils, indirect water heaters or domestic water recirculation systems. By locating the removable, spring-loaded IFC inside the pump casing, a separate in-line flow check is eliminated. The reduced pressure drop of the IFC increases the 0011 flow performance over in-line check valves. Both the IFC and cartridge are easily accessed for service instead of replacing the entire unit.
